Are you tired of wasting your heating dollars as they blow away on chilly winter winds? This valuable workshop will give you guidance for making your home feel more comfortable and cozy while your heating dollar goes further. Join Laura Biddulph of the Center for Ecological Technology as we cover low and no cost options that typically save Massachusetts' homes up to 30% on their energy costs !

Amherst has been named one of four test pilot communities that will participate in the Western Mass Saves Challenge, a new community energy saving program presented by SmartPower and made possible by Western Massachusetts Electric Company. Jonathan Edwards of SmartPower will teach you how to use this great energy savings tool.

The Town's ability to coordinate free public programming is due to generous financial sponsorship from Amherst and Hampshire Colleges, and a grant from the Massachusetts Renewable Energy Trust's "Clean Energy Choice" program, which supports the Energy Task Force Coordinator position.
